

MARK KASHEF

You Can Now Build 3D Worlds to Learn Anything

Idea > Plan > Build > Host

26 filming scenes

Requests > Plan > Review

About 17 minutes

Read the Say blocks.

Use the picture and notes to set up
each shot.

Controls: scroll to navigate / H hide controls / Scenes to jump / All content appears immediately

Final pickups: current plugin cards, community source entry and public second-link destination.

Open the filming site: immersive-learning-worlds.markkashef.chatgpt.site

PICTURE

Live game at <https://wintry-soul-6awh.here.now/>. Click World Tour . Let the camera move through the rooms under speech. Cut from the tour to a station interaction around the first thirty seconds; preserve the genuine click and response.

ON-SCREEN COPY

Idea > Plan > Build > Host

EDITING NOTE

The tour is an animated camera inside the application, not a prerecorded video. Keep world footage dominant; no X montage before the viewer sees it work.

SOURCE / TRUTH

Owned live game and original production plan. Broad subject choice is the premise; learning effectiveness is not measured.

SAY

You can now build a 3D world around something you want to learn. So watch this. I click World Tour, and it takes us through this entire space, with this little Codex character showing us around.

I built this with Astra and Blender. Each of these stations introduces a different concept, and you can move through the world and practise as you go.

Mine happens to teach Codex, because that's something I teach in my community. But you could take this same approach and apply it to something you're trying to understand, or something you want to teach other people.

I'm gonna show you how to go from an idea, to a proper plan, to having it built, and then putting it online so anyone can use it.

PICTURE

Exit the tour, click Step inside > , open The control room. Make a choice and show feedback. Open mission navigation; enter The context archive. Show its source choices and result. Finish with the map/another room.

ON-SCREEN COPY

Explore / Make a choice / See the result

EDITING NOTE

Allow the feedback to remain readable. Match narration to the observed response; do not fake a wrong answer or completed mission. Skip does not count as completion.

SOURCE / TRUTH

GAME-PRODUCTION-PLAN.md §§3-5; release 0.1.2 adds answer/skip controls.

SAY

All right, so when you enter, you can click into one of these stations. This first one breaks down the pieces that let an AI agent do useful work. You make a choice here, and then it gives you feedback on what happened.

Then over here, we have context. So this is where you start dealing with the information you're giving the agent. You can work through the example, see what you missed, and try again. And if you're stuck, you can show the answer or skip ahead.

There are twelve stations across the world, so you can work through it in order or come back to a particular concept. These are practice scenarios inside the game. You're not connecting your actual Codex account to play.

For me, this is where the education angle gets interesting. I can take something I already teach, give you a place to explore it, and let you make the decisions yourself.

PICTURE

Fresh Codex session. Plugins tab; type Blender. Open the relevant current card descriptions. Confirm the Blender connection, then show the original request cards in the guide.

ON-SCREEN COPY

Build a world. Make it useful. (overview); Blender (live search field)

EDITING NOTE

Name-neutral narration is intentional. Confirm exact cards at filming; do not call them “Game Station” without seeing that name. Existing installed plugins may show Installed; no staged reinstall required. If search results change, film the relevant current setup rather than implying two fixed results.

SOURCE / TRUTH

Local manifests confirm Game Development Studio and Build 3D Game Rooms; marketplace results remain a filming pickup.

SAY

Now, let me give you the tools to get started. I'm opening a brand-new Codex session, and before I send it anything, I'm going into Plugins and searching for Blender.

Open the relevant cards here and look at what they include. You want the agent to have a way to create the 3D assets, and a workflow for bringing them into something you can play in the browser. Follow the setup instructions for the plugins you choose. The Blender setup guide I'm sharing walks through that with your agent.

Once that's ready, we go from idea, to plan, to build, to hosting. And the idea can be pretty straightforward. Pick something you want to learn or teach, then describe what someone should be able to do after spending time in your world.

MARK'S REQUEST

what if we made a 3D game that would allow someone to playfully learn how codex works in every way? go back and fourth with me on the idea

SAY

Okay, so let me show you what I actually asked. I said, “what if we made a 3D game that would allow someone to playfully learn how codex works in every way?” And then I asked it to go back and forth with me on the idea.

That's where this started. We talked through what the game should teach and how someone would move through it. You can start that conversation with whatever subject you want to teach.

PICTURE

Use the Mark request card on this PDF page, or the matching user message in the original 3D Game conversation. Keep the exact message visible while reading the quoted sentence.

ON-SCREEN COPY

Mark's request

EDITING NOTE

The card is a typeset excerpt from the real user message, not a recreated chat screenshot. Preserve the original spelling in the visible quote. Earlier brainstorming preceded the plugin setup shown for the tutorial.

SOURCE / TRUTH

Original 3D Game conversation, September 9 Toronto, log line 71; role=user.

MARK'S FOLLOW-UP

so this is cute but I need the highest fidelity for the game using the codex logo as the mascot giving you a tour through the codex ecosystem

create a comprehensive plan for how we'll create every aspect of the game, how you'll test AND assess the game in your internal browser before we know it's perfect ready to distribute to my community

and host it on here.now

SAY

Then, after we had the tools connected and a small test running, I pushed it further. I wanted the Codex logo as the mascot, taking you through the ecosystem.

And here's what I asked it to plan: every aspect of the game, how it would test and assess it in the browser, and how we'd host it for my community.

So for your version, describe the experience you want, who it's for, and how you'll check that it works. Ask it to turn that into a plan you can read before committing to the build.

PICTURE

Use the second Mark request card on this PDF page. Point to the mascot requirement, then the testing and assessment sentence, then the hosting line.

ON-SCREEN COPY

Mark's follow-up

EDITING NOTE

This is an excerpt from a later user message after the smoke test. Do not imply both requests were one prompt or that the full world existed already. The final hosting-authentication paragraph is omitted from this filming excerpt.

SOURCE / TRUTH

Original conversation log line 695; role=user. Three consecutive request paragraphs reproduced verbatim.

CODEX'S RESPONSE

I've written the complete production and release plan and opened it for review.

PICTURE

Show the Codex response card on this PDF page, then open The original plan in the reader. Advance to plan-01 for the next scene.

ON-SCREEN COPY

Codex's response > Review the plan

EDITING NOTE

Explicitly attribute the document to Codex. The fifteen following slides are excerpts from its written plan, not fifteen prompts Mark typed. Margin notes explain what a viewer should assess now.

SOURCE / TRUTH

Original conversation log line 864; role=assistant; links the generated GAME-PRODUCTION-PLAN.md. The retained document has later status edits; do not call it an untouched initial chat response.

SAY

Now this is what Codex came back with. It wrote a production plan around that request, including the rooms, the lessons, the assets, and the checks it proposed to run.

You don't have to write all of this yourself. But you do have to read what it proposes. I'm going to walk through the sections and show you what I'd look for before giving a plan like this the go-ahead.

PICTURE

Open plan-01. Point to the two enlarged plan excerpts on the left and their matching margin notes. For the surrounding text, open Read this entire section, annotated. Everything is visible immediately.

ON-SCREEN COPY

Define the finished experience / Exact plan excerpts / Define what “done” includes / Get to useful interaction

EDITING NOTE

Follow each quote with its explanation. Quotes come from Codex’s written plan; margin notes are retrospective review commentary. Keep the quote in frame while explaining it.

SOURCE / TRUTH

GAME-PRODUCTION-PLAN.md §1, Codex-authored production plan retained from the September 9 session; later status edits exist. Both excerpts validated as exact substrings. Requirements are not claims that every detail shipped.

SAY

Codex proposed twelve missions, three chapters, a capstone, and downloadable resources. That’s the scope it’s putting in the plan. I’d check that before accepting it, because you may only need one room and one useful exercise.

Then it proposes a first useful action within sixty seconds. That’s an experience target to test later. The wording here defines what completion should include; it doesn’t prove the work is already finished.

PICTURE

Open plan-02. Point to the two enlarged plan excerpts on the left and their matching margin notes. For the surrounding text, open Read this entire section, annotated. Everything is visible immediately.

ON-SCREEN COPY

Specify the visual work / Exact plan excerpts / Ask the agent to make references / Judge the delivered view

EDITING NOTE

Follow each quote with its explanation. Quotes come from Codex’s written plan; margin notes are retrospective review commentary. Keep the quote in frame while explaining it.

SOURCE / TRUTH

GAME-PRODUCTION-PLAN.md §2, Codex-authored production plan retained from the September 9 session; later status edits exist. Both excerpts validated as exact substrings. Requirements are not claims that every detail shipped.

SAY

Here Codex proposes making a visual target package: the arrival shot, a mascot close-up, and a sample of the movement. Those are examples it plans to create. We hadn't supplied finished example shots.

I'd keep that step because it gives you something small to judge before it builds every room. And this sentence sets the browser as the standard. That's where people will use the world, so inspect it there.

PICTURE

Open plan-03. Point to the two enlarged plan excerpts on the left and their matching margin notes. For the surrounding text, open Read this entire section, annotated. Everything is visible immediately.

ON-SCREEN COPY

Design a task for each room / Exact plan excerpts / Specify a real decision / Define the final challenge

EDITING NOTE

Follow each quote with its explanation. Quotes come from Codex’s written plan; margin notes are retrospective review commentary. Keep the quote in frame while explaining it.

SOURCE / TRUTH

GAME-PRODUCTION-PLAN.md §3, Codex-authored production plan retained from the September 9 session; later status edits exist. Both excerpts validated as exact substrings. Requirements are not claims that every detail shipped.

SAY

Here's one of the actual mission instructions. Select the brief, the sample file, the project instructions, and remove a stale source. You can see what someone is going to do in that room. And further down, the capstone has five things it should assess. If you're teaching something else, replace these decisions with the ones a person needs to practise in your subject.

SAY

This is a useful line to keep in the plan. Explain why a plausible wrong choice failed. If I pick the wrong context, show me what that does to the result. Otherwise I'm guessing until something turns green. And this other line says the dialogue shouldn't block me once I know what to do. Let me move through it at my own pace.

PICTURE

Open plan-04. Point to the two enlarged plan excerpts on the left and their matching margin notes. For the surrounding text, open Read this entire section, annotated. Everything is visible immediately.

ON-SCREEN COPY

Explain the consequence / Exact plan excerpts / Teach through the mistake / Keep the learner in control

EDITING NOTE

Follow each quote with its explanation. Quotes come from Codex's written plan; margin notes are retrospective review commentary. Keep the quote in frame while explaining it.

SOURCE / TRUTH

GAME-PRODUCTION-PLAN.md §4, Codex-authored production plan retained from the September 9 session; later status edits exist. Both excerpts validated as exact substrings. Requirements are not claims that every detail shipped.

PICTURE

Open plan-05. Point to the two enlarged plan excerpts on the left and their matching margin notes. For the surrounding text, open Read this entire section, annotated. Everything is visible immediately.

ON-SCREEN COPY

Separate practice from live tools / Exact plan excerpts / Define what runs in the game / Make lessons checkable

EDITING NOTE

Follow each quote with its explanation. Quotes come from Codex's written plan; margin notes are retrospective review commentary. Keep the quote in frame while explaining it.

SOURCE / TRUTH

GAME-PRODUCTION-PLAN.md §5, Codex-authored production plan retained from the September 9 session; later status edits exist. Both excerpts validated as exact substrings. Requirements are not claims that every detail shipped.

SAY

Over here, the plan says these are simulations. That's why you can practise a Codex workflow in the game without connecting your own account. Then it asks for sources, dates, and a way to reproduce each claim. If you teach a product that changes, you need a way to come back and check the lesson later.

PICTURE

Open plan-06. Point to the two enlarged plan excerpts on the left and their matching margin notes. For the surrounding text, open Read this entire section, annotated. Everything is visible immediately.

ON-SCREEN COPY

Separate the world from lessons / Exact plan excerpts / Choose the browser engine / Keep teaching content editable

EDITING NOTE

Follow each quote with its explanation. Quotes come from Codex’s written plan; margin notes are retrospective review commentary. Keep the quote in frame while explaining it.

SOURCE / TRUTH

GAME-PRODUCTION-PLAN.md §6, Codex-authored production plan retained from the September 9 session; later status edits exist. Both excerpts validated as exact substrings. Requirements are not claims that every detail shipped.

SAY

Blender gives you the assets. You still need something to run the world in a browser. The plan chose Babylon for that, and it separated the lessons from the scenery. You don't need to memorize all the folders here. What you want is to be able to change a question or update a lesson without rebuilding the entire room.

PICTURE

Open plan-07. Point to the two enlarged plan excerpts on the left and their matching margin notes. For the surrounding text, open Read this entire section, annotated. Everything is visible immediately.

ON-SCREEN COPY

Check exported assets / Exact plan excerpts / Specify the handoff format / Inspect after export

EDITING NOTE

Follow each quote with its explanation. Quotes come from Codex’s written plan; margin notes are retrospective review commentary. Keep the quote in frame while explaining it.

SOURCE / TRUTH

GAME-PRODUCTION-PLAN.md §7, Codex-authored production plan retained from the September 9 session; later status edits exist. Both excerpts validated as exact substrings. Requirements are not claims that every detail shipped.

SAY

This is where the plan gets specific about getting the asset out of Blender. Export it with its materials and animations, then inspect it in the browser. You can have something that looks great in Blender and different once it's in the game. This line tells the agent to check that handoff instead of treating the export as finished.

PICTURE

Open plan-08. Point to the two enlarged plan excerpts on the left and their matching margin notes. For the surrounding text, open Read this entire section, annotated. Everything is visible immediately.

ON-SCREEN COPY

Give it measurable budgets / Exact plan excerpts / Limit the initial download / Name the testing limit

EDITING NOTE

Follow each quote with its explanation. Quotes come from Codex’s written plan; margin notes are retrospective review commentary. Keep the quote in frame while explaining it.

SOURCE / TRUTH

GAME-PRODUCTION-PLAN.md §8, Codex-authored production plan retained from the September 9 session; later status edits exist. Both excerpts validated as exact substrings. Requirements are not claims that every detail shipped.

SAY

These are proposed budgets from the plan. Twelve megabytes before the first interaction, for example. That gives the agent something concrete to measure instead of saying make it fast. You'd tune these for your own project. And this sentence matters when you're checking mobile: a phone-sized browser window doesn't tell you how it runs on an actual phone.

PICTURE

Open plan-09. Point to the two enlarged plan excerpts on the left and their matching margin notes. For the surrounding text, open Read this entire section, annotated. Everything is visible immediately.

ON-SCREEN COPY

Make every lesson usable muted / Exact plan excerpts / Preserve the lesson without audio / Plan an alternative route

EDITING NOTE

Follow each quote with its explanation. Quotes come from Codex’s written plan; margin notes are retrospective review commentary. Keep the quote in frame while explaining it.

SOURCE / TRUTH

GAME-PRODUCTION-PLAN.md §9, Codex-authored production plan retained from the September 9 session; later status edits exist. Both excerpts validated as exact substrings. Requirements are not claims that every detail shipped.

SAY

Here's a very practical requirement. The whole thing should work muted. Captions, readable instructions, and then a text route if the 3D view isn't available. When you write this into the plan, you're asking the agent to build those paths alongside the world. It's much easier to remember them here than after you've finished all the rooms.

PICTURE

Open plan-10. Point to the two enlarged plan excerpts on the left and their matching margin notes. For the surrounding text, open Read this entire section, annotated. Everything is visible immediately.

ON-SCREEN COPY

Test failures and recovery / Exact plan excerpts / Test beyond the correct answer / Require a real walkthrough

EDITING NOTE

Follow each quote with its explanation. Quotes come from Codex’s written plan; margin notes are retrospective review commentary. Keep the quote in frame while explaining it.

SOURCE / TRUTH

GAME-PRODUCTION-PLAN.md §10, Codex-authored production plan retained from the September 9 session; later status edits exist. Both excerpts validated as exact substrings. Requirements are not claims that every detail shipped.

SAY

Look at how specific Codex made the testing plan. Missing assets, slow networks, old saves. Those are things that can go wrong even when the correct answer works. Then it says to open the actual build in the internal browser and play through the visible controls. That's the kind of testing instruction I'd want in the plan before leaving it running.

SAY

The plan even spells out how it should assess quality. There's a scorecard and a proposed threshold, but read this other sentence: it's an assistant assessment. So that number can help organize the review. It doesn't establish that someone in my community learned anything. You'd need people using it to answer that.

PICTURE

Open plan-11. Point to the two enlarged plan excerpts on the left and their matching margin notes. For the surrounding text, open Read this entire section, annotated. Everything is visible immediately.

ON-SCREEN COPY

Define how quality is judged / Exact plan excerpts / Give review a defined bar / Keep the claim honest

EDITING NOTE

Follow each quote with its explanation. Quotes come from Codex's written plan; margin notes are retrospective review commentary. Keep the quote in frame while explaining it.

SOURCE / TRUTH

GAME-PRODUCTION-PLAN.md §11, Codex-authored production plan retained from the September 9 session; later status edits exist. Both excerpts validated as exact substrings. Requirements are not claims that every detail shipped.

PICTURE

Open plan-12. Point to the two enlarged plan excerpts on the left and their matching margin notes. For the surrounding text, open Read this entire section, annotated. Everything is visible immediately.

ON-SCREEN COPY

Define what blocks release / Exact plan excerpts / Make serious defects blockers / Require evidence of the repair

EDITING NOTE

Follow each quote with its explanation. Quotes come from Codex’s written plan; margin notes are retrospective review commentary. Keep the quote in frame while explaining it.

SOURCE / TRUTH

GAME-PRODUCTION-PLAN.md §12, Codex-authored production plan retained from the September 9 session; later status edits exist. Both excerpts validated as exact substrings. Requirements are not claims that every detail shipped.

SAY

This is the part that tells it when to keep working. If progress is lost or instructions are unreadable, stop the release and fix it. Then record the problem, the change, and the check afterward. Otherwise you can end up with an agent telling you everything is complete while a person still can't get through the lesson.

PICTURE

Open plan-13. Point to the two enlarged plan excerpts on the left and their matching margin notes. For the surrounding text, open Read this entire section, annotated. Everything is visible immediately.

ON-SCREEN COPY

Verify the hosted version / Exact plan excerpts / Publish the build output / Test the actual shared URL

EDITING NOTE

Follow each quote with its explanation. Quotes come from Codex’s written plan; margin notes are retrospective review commentary. Keep the quote in frame while explaining it.

SOURCE / TRUTH

GAME-PRODUCTION-PLAN.md §13, Codex-authored production plan retained from the September 9 session; later status edits exist. Both excerpts validated as exact substrings. Requirements are not claims that every detail shipped.

SAY

Hosting is already in the plan. It says to upload the production output, and then it says a successful upload isn't a successful release. Open the URL, go through the world, and check the downloads. That's why the job continues after the agent gives you a link. We'll do the hosting setup after this.

PICTURE

Open plan-14. Point to the two enlarged plan excerpts on the left and their matching margin notes. For the surrounding text, open Read this entire section, annotated. Everything is visible immediately.

ON-SCREEN COPY

Give the run checkpoints / Exact plan excerpts / Keep a working version / Prove one lesson before expanding

EDITING NOTE

Follow each quote with its explanation. Quotes come from Codex’s written plan; margin notes are retrospective review commentary. Keep the quote in frame while explaining it.

SOURCE / TRUTH

GAME-PRODUCTION-PLAN.md §14, Codex-authored production plan retained from the September 9 session; later status edits exist. Both excerpts validated as exact substrings. Requirements are not claims that every detail shipped.

SAY

The sequence here asks for a working checkpoint at each stage, starting with the mascot and one finished mission. That gives it a smaller thing to inspect before expanding. In our actual run, it built out the scaffold earlier than this plan proposed, and there was more iteration afterward. So this is the intended build order, not a claim that it followed every step perfectly.

PICTURE

Open plan-15. Point to the two enlarged plan excerpts on the left and their matching margin notes. For the surrounding text, open Read this entire section, annotated. Everything is visible immediately.

ON-SCREEN COPY

Keep the source and evidence / Exact plan excerpts / Ask for an editable handoff / Plan for the next update

EDITING NOTE

Follow each quote with its explanation. Quotes come from Codex's written plan; margin notes are retrospective review commentary. Keep the quote in frame while explaining it.

SOURCE / TRUTH

GAME-PRODUCTION-PLAN.md §15, Codex-authored production plan retained from the September 9 session; later status edits exist. Both excerpts validated as exact substrings. Requirements are not claims that every detail shipped.

SAY

And finally, look at what it has to hand back. The source, the Blender files, the build, the evidence, and the hosted URL. That's what lets you keep developing it. After the first release I asked for the World Tour and the answer controls. You're going to have those follow-up ideas too, so keep the files you need to make them.

BEFORE YOU APPROVE

Scope that fits your time and usage

A useful task for the learner

Tests and a hosting check

SAY

Before you tell it to build, read the plan against what you asked for. Does the scope fit the time and usage you're willing to spend? Is there something useful for the learner to do? Does it explain how it'll test the result and get it online?

If something's missing, ask it to revise the plan first. I'd also want one finished room and one working lesson before it expands. Our run needed plenty of iteration, so a detailed plan still needs you checking the result.

PICTURE

Direct to camera for the review advice. Use the three-item review card on this PDF page as an editing overlay, then return to the reviewed plan. Do not show a fabricated historical approval message.

ON-SCREEN COPY

Scope / Learning task / Test and host

EDITING NOTE

This is present-day advice for viewers, not a claim Mark historically performed this exact checklist. The audit records that the run expanded before the finished sample proposed in the plan.

SOURCE / TRUTH

Current editorial review advice grounded in plan §§1, 3, 10, 13, 14 and the execution audit.

PICTURE

build, then model/effort selector in a fresh session. Show the reviewed plan attached and a short execution request. Use the real build history for subsequent progress footage.

ON-SCREEN COPY

Then let it build.

EDITING NOTE

No 20-30% / 40% allowance estimates. Do not present an illustrative fresh-session prompt as the exact historical initiating prompt. Main run was 17h24m through 0.1.0; approximate eighteen-hour wording is scoped accordingly. Allow time for the selector and prompt to be legible.

SOURCE / TRUTH

Owned execution audit; effort recommendation is Mark's judgment. Usage depends on workload and plan, not a simple dollar-price ratio.

SAY

Once you're happy with the revised plan, tell it to execute that version. I would start with Astra on medium or high, depending on the size of what you're asking for. That's my starting recommendation. I haven't run this exact world at every effort level to compare them.

And be realistic about how much you're putting into the request. A small scene can be much quicker. This one took roughly eighteen hours, including the testing and refinement, and the walkthrough and answer controls came afterward.

If you're on the twenty-dollar plan, I'd start with one small scene and one useful interaction before committing to an overnight build like this. Check the usage you have available and set a scope you can finish.

Then let it cook. Tell it to keep a working version, test each part, fix the problems it finds and record what's still unfinished. You can come back and inspect the result as it goes. The first time you see the world on screen, click around it. Follow the same path someone else would take, and tell it exactly where the experience starts to fall apart.

PICTURE

host; <https://here.now/> then current agent instructions. Copy the current setup prompt, paste into Codex. Show authentication completion without private details, then publishing request and live URL. Open live world and enter one station.

ON-SCREEN COPY

Put your world online.

EDITING NOTE

Copy current official instructions on filming day. Show a real deployment only to a dedicated demo destination or verified intended update; avoid overwriting the community game for a staged shot. Compress waiting with a clear cut. Authenticated publishing supports permanence; quotas and account terms still apply.

SOURCE / TRUTH

<https://here.now/docs> ; [research/MACRO-LEARNING-WORLDS-2026-09-10.md](#). Verify instructions immediately before filming.

SAY

Okay, so assuming it's built and you've tested it, the next step is hosting it. This is a platform I found called here.now. I'm not affiliated with it.

It gives you instructions you can hand to your AI agent so it can publish the site on your behalf. I'm copying the current setup prompt here, going back into Codex and pasting it into the session with my project.

Follow the account setup if you want the link to stay up. Anonymous sites are temporary, so don't skip that part if you're sharing this with other people.

Then you can ask it to build the production version, publish the website files to here.now, and check the result at the link it gives you. It should publish what the website needs to run; keep your private files and account details out of it.

Once you get the link, open it. Enter the world, click a station and check that it works there, too. That's the version your viewers or students are going to open, so that's the version you want to test before you send it around.

PICTURE

possibilities. Attribute ashe's original Tesla post; open Model X demo and move its separation control. Then original Human Atlas post and actual layer controls. Return to Mark/world.

ON-SCREEN COPY

Choose your own subject.

EDITING NOTE

Attribute the creator on each example. If a demo fails live, use attributed post footage and say what the post shows. Do not substitute invented footage or call anatomy a working physiology simulation.

SOURCE / TRUTH

<https://x.com/ashebytes/status/2096009146248122416> ;
<https://x.com/ashebytes/status/2096221988763173186> . Public demos verified in macro research; subject accuracy not audited.

SAY

And I'm really just scratching the surface with the subject I chose. This person on X, ashe, built an interactive Tesla Model X explainer with Astra. You can separate the components and explore how the pieces fit together.

They also shared this Human Atlas, where you can explore anatomical layers and move around the model. These are examples of what people are building. I'm not treating the anatomy demo as a medical reference without checking its accuracy.

You could take this toward a classroom subject, training people on equipment, or explaining a process to your team. Start with a part of the subject that would be easier to understand if you could explore it and change something yourself.

PICTURE

resources. Click the downloadable Planning kit card and show the resulting ZIP file listing. Then actual community: Classroom > Claude Code Living > Claude and Codex Systems > scroll to bottom; show verified source package. Finish on free resource card and Mark.

ON-SCREEN COPY

Start with the actual plan. / Planning kit / Community source code

EDITING NOTE

Record this access claim only after the exact community entry and free destination exist and have been verified. The planning site provides the downloadable kit; the exact second-description-link destination and community entry still need verification. User supplied the classroom route; it has not yet been inspected. If pending, leave this final pickup unrecorded rather than presenting it as already available. Keep the two destinations visually distinct; no extra like/comment/subscription CTA stack.

SOURCE / TRUTH

User's explicit resource promise and classroom route; resource manifest and final publication checks must support delivery.

SAY

If you want the entire planning file I used for this world, along with the starting prompt and the Blender setup guide you can give your agent, you can grab that for free in the second link down below.

And if you want the exact code from this game to repurpose it for something like Claude, or take it further with your own subject, that's the community resource. Go into Classroom, open Claude Code Living, then Claude and Codex Systems, and scroll to the bottom.

Take the plan, give it to your agent, and start with one room that teaches something you care about. I'll see you in the next one.
